

MOKI™
Defending Against Every Element.

When we say four season, we mean it. Our ambassadors take Moki™ to the Himalayas, and we use it for surf trips on the coast. With half of Moki's™ single-wall exterior convertible to mesh and optional Cheez™ insulation, Moki™ gives you the flexibility and comfort you need in any climate. With an optional, additional vestibule for extra gear and the ability to link two or more together, Moki™ is the perfect base camp for all of your adventures.

Capacity: 3
Minimum Weight: 7.5 lbs (3.4 kg)
Packed Dimensions: 10.2 lbs (4.64 kg)
Frame: 5 DAC 9 / 9.6 / 10.25 mm Featherlite®
Shell Fabric: OSMO™ Waterproof Breathable
Fly Fabric: N/A
Floor Fabric: 30D PU Nylon Ripstop (5000 mm)
Floor Dimensions: 90" x 75" (229 x 191 cm)
Interior Height: 48" (122 cm)
Floor Area: 43 sq ft (4.01 sq m)
Vestibule Area: 10 sq ft (0.93 sq m)

MOKI™
3 PERSON

Moki™

- Internal Poles
- Zipper for Vestibule Attachment
- External Poles
- UVX Window
- Internally Deployable Strutted Vents
- Dual Side Doors
- 2nd Main Door
- Pole Sleeves
- Multiple Guy-out Points
- Reinforced Corner Pockets
- Door Tie-backs

Moki™ with Vestibule and Connector

- UVX Window
- Zip-in Vestibule
- Upper Vestibule Panel
- Connection Panel (with red Velcro®)

NEMO Innovation

1. All Year Comfort: Moki™ is designed to be comfortable in all four seasons, no matter the weather. You can convert roughly half of Moki's™ shell to mesh by tying back its four large doors. Guy-out the side doors and open the overhead vents to provide maximum ventilation in the rain. Add Cheez™ insulation (sold separately) for added warmth on the coldest nights.

2. Linking Moki's™: Setting up a base camp or traveling with a crew? The unique vestibule design of Moki™ allows two or more tents to connect. Use one as a sleeping quarters and the other for gear storage or as a gathering place. To connect tents, zip a connection panel to an upper vestibule panel and join them to the tents where the vestibules would attach. The connection panel is similar to the upper vestibule panel but has red Velcro®.

Preparing Your Tent

- Lay out the contents of Moki™ and make sure that you received your tent and the following: four long poles, one short pole, curved vestibule pole, vestibule, upper vestibule panel, connection panel with red Velcro®, pole stuff sack, dry bag style stuff sack, storage attacher, 10 stakes, guy lines, Seamgrip™ with nozzle, Tear-aid™ fabric repair patches and pole repair sleeve.
- NOTE: TENT IS NOT FULLY WATERPROOF UNTIL IT IS SEAM SEALED.** In some areas of the tent, seams are sewn directly through the tent shell to create a very strong construction. Water can leak through these areas so it is necessary to cover the stitching with Seamgrip™. The Seamgrip™ also adds strength so you may choose to apply it to all exterior seams. However, it is only necessary in the areas highlighted below.

To seam seal your tent, first locate the areas highlighted above. These are the locations of pole wraps, pole clips, and Cheez™ connections. On the outside of your tent, clean any dirt or moisture off the surface. Carefully squeeze the Seamgrip™ through the applicator tip onto the stitching. Use only enough to completely cover the stitching. Be careful not to contaminate zippers or Velcro®. Allow at least 24 hours for curing before use. The Seamgrip™ remains tacky, you can lightly dust the fully cured Seamgrip™ with talcum powder.

3. Accessibility: The full-size included vestibule provides plenty of additional space for gear storage and a dry entry during bad weather. On sunny days, the vestibule is easily removed by unzipping it from the tent. Side doors add extra exits and provide a convenient way to load gear in and out of the tent. Open the door and stand up for a morning stretch or brush your teeth without having to put your shoes on.

Tent Setup

3. When choosing a location to pitch your tent, select a flat area free of fragile undergrowth and sharp objects. Begin the setup of your tent by staking it out. This will help prevent the tent from blowing away.

4. Insert one end of a black pole through the pole sleeve and into the grommet on red webbing. Place the other end of the pole through the opposite pole sleeve and into the grommet on the red webbing. Repeat with the second pole in the grommets on the black webbing.

5. The corners of the tent are reinforced and have metal buttons to insert a long grey pole into one of the far corners. Bend the pole into the tent until the other end of the pole can be brought inside the tent and placed in the nearby diagonal corner. Make sure the pole sits in the metal buttons. Repeat with the second pole.

6. Insert the short pole on top of Moki™. The end tips will fit into the grommets on the triangles between the top vents. Use the finger loops to help get the pole in and out of place.

Tent Setup (continued)

7. With both poles secured in the reinforced corners, use the Velcro® wraps to attach the poles along the inside of the tent shell. Use the pull tabs on the Velcro® to make wrapping and unwrapping easier.

8. To set up the optional vestibule, zip the upper vestibule panel to the vestibule. **NOTE: Be sure to use the upper vestibule with zipper flap, not the connection panel with red Velcro®.** Slide the vestibule pole through the pole sleeve. Attach the end tips to the grommets in the vestibule and tent anchors, and tighten webbing to hold vestibule in place. Zip the vestibule to the tent.

9. Stake your vestibule while it is zipped closed. Place the stake through the anchor and adjust the webbing for proper tension.

10. In extreme weather, attach the supplied guy lines to the guy-out loops and stake in place. In high winds, it is best to face the main doors or vestibule into the wind.

Accessories

Several accessories are available for Moki™ to add comfort or longevity to your tent.

Moki™ Footprint

To install the Moki™ Footprint, slip the split rings over each of the eight corresponding corner anchors. Make sure the Footprint is not exposed under the tent shell or it could collect water in a rain storm.

Moki™ Pawprint™

Connect the button snaps on the corners of the Pawprint™ to the button snaps on the interior corners of the tent. Attach the sides of the Pawprint™ with Velcro® to the sides of the tent.

Extra Moki™ Vestibule

For extra gear storage, add a vestibule to your second door. This vestibule is identical to the one included with Moki™. Vestibules can be used on either door.

Accessories (continued)

The Moki™ Cheez™ is built for the most brutal conditions on the planet. It is made from a metallized fabric laminate that substantially increases the temperature inside the tent while staying completely breathable.

It is easiest to install the Cheez™ before the inner poles are in position. Lay the Cheez™ on top of the poles and connect the snaps on the corners to the upper snap in the corners of the tent. Place the pole ends in the large button snaps like the usual setup.

Pull the Velcro® tabs on the inside of Moki™ through the slits of the Cheez™ and connect them to the inside. Connect the Velcro® along the sides at floor level.

Moki™ Link™

The Moki™ Link™ enhances the living space between two Moki's™. Use it as a communal meeting space, a versatile entrance, a sleeping area for pets, or covered storage for your wet gear.

To install, first zip the Connection Panel (included with each Moki™ tent) to both sides of the Link™. Insert a pole into each pole sleeve. Finish by zipping the Connection panels to the Moki™ tent doors and staking in place. Make sure to close all snaps.

Tent Take Down

- To take down Moki™, first remove all gear including vestibules and footprint. Keep your Pawprint™ and Cheez™ attached if you like. Remove as much moisture as possible. Water will add weight to your pack and can lead to mildew.

2. Unclip and remove the external poles. Carefully pull the interior poles out through a main door. If the pole wraps bind to the interior poles, it may be necessary to detach them before removing the poles. If the pole sections have frozen together, simply warm them in your gloved hand for a minute or two and they should separate easily.
- Try to clean as much dirt and debris from your tent as possible before packing it. This will help preserve the breathability of the tent fabrics and reduce overall wear and tear.

4. Stuff the tent shell into its dry bag style stuff sack. Fold the top edge of the stuff sack down several times to make an airtight seal. Allow excess air to escape while compressing. Secure the stuff sack with the compression straps on both sides. Place the poles into the pole bag. Moki™ can be carried in its separate stuff sacks to split the load, or carried together in the large drawing stuff sack on the end of the pole bag.

5. Remember to leave no trace, even in winter. Before leaving your campsite, take a thorough look around making sure you have not left anything behind, out of place, or damaged.

Tips for Extending the Life of Your Tent

- Avoid rough ground, especially rocks and pavement.
- Make sure the tent is clean and dry before packing.
- Store the tent unpacked to allow air circulation.
- Occasionally inspect the tent for wear and tear.
- Do not store the tent exposed to UV light.

Fabric

- *My tent has a mildew smell.*
- Always pack and store your tent dry! Mildew is not only smelly and bad for the tent materials, it is also unhealthy. Contact Rainy Pass Repair (see NEMO Repair section) for advice about safely removing mildew.
- *I sliced my tent while digging it out during a storm!*
- Damaging tents while shoveling them out on big mountains is a common problem. Take care when using sharp tools near your tent! Remember that your tent is your home in the mountains and it's made of lightweight fabric. Shovel most of the snow away and shake the rest of the tent or cover your shovel with a stuff sack or length of tape to protect the tent fabric from the shovel's sharp edges. Small tears can be reinforced with Seamgrip™. Larger areas can be hand-stitched and sealed with Seamgrip™ or you can send your tent to Rainy Pass for repair (see NEMO Repair section).

Seam Sealing

- *I woke up in a puddle!*
- Did you seam seal your tent? There are many places on the outside of Moki™ where we chose to stitch through the waterproof tent shell in order to provide maximum strength. It is necessary to seam seal these areas to make the tent watertight. Please see the **Tent Setup** section for details on the necessary areas to seam seal. Seamgrip™ can be used on all exterior sewn seams if you choose. It adds strength in addition to waterproofness. Allow to dry overnight. Note that Seamgrip™ can stick to itself even after curing, so it is best to lightly dust fully cured areas with talcum powder. Please visit www.nemoequipment.com for more information.

Poles

- *My tent was caught in an avalanche and one of the poles was broken!*
- The best way to fix a broken pole is with the repair sleeve that came with your tent. If the pole is cracked or broken cleanly, the repair sleeve should slide in place over the damaged area. If the pole is bent or has a burr around the break, it may be necessary to cut or file the damaged area. A temporary fix may be possible by tying another pole or extra tent stake alongside the damaged area. Contact NEMO™ to order replacement poles.

NEMO Repair

If you have any problems with a NEMO™ product, please contact Rainy Pass Repair, Inc., the industry leader in outdoor product care, for repair or replacement. If you have any questions regarding warranty and repair please call NEMO Equipment. It is not necessary to clean the item before sending, but it will be appreciated if you remove any excessive soiling. Rainy Pass will be happy to give you advice about safely cleaning your product. Please provide the following when you send a NEMO™ product to Rainy Pass:

- A note with your name, phone number, address, e-mail and problem description. A repair form can be downloaded at: www.nemoequipment.com/pdf/NEMO_repairform.pdf
- Mark all damaged areas on the product with masking tape.
- Pack the product in a sturdy cardboard box with plenty of room. If possible, use the original box to reduce waste.
- We strongly recommend using a traceable method of shipping. We do not take responsibility for items not received and/or not being tracked to this location.

Ship to: Rainy Pass Repair, Inc. 4415 Stone Way North Seattle, WA 98103
To contact Rainy Pass: Phone: 1.888.747.7867 Email: repair@rainypass.com www.rainypass.com

NEMO Warranty

NEMO guarantees every product we sell. We put great effort into choosing the best materials and providing you with the highest level of workmanship. If one of our products does not meet your expectations during its useful life, we promise to repair it, replace it, or give you a refund at our discretion. NEMO™ does not warranty products against normal wear and tear, unauthorized modifications or alterations, improper use, improper maintenance, misuse or neglect or if the product is used for a purpose for which it is not intended. Except as expressly set forth in these terms and conditions, NEMO™ is not liable for any direct, indirect or consequential damages arising out of or resulting from the use of a NEMO™ product. The warranties set forth in these terms and conditions are in lieu of all other warranties, express or implied, including without limitation, implied warranties of merchantability or fitness for a particular purpose.

We do as much of our printing as possible on recycled paper with environmentally friendly inks.

NEMO Green

Our spirit is in adventure. Without the beautiful wild places where adventures are made, our spirit dies. Please join us in protecting the planet and preserving the places where our spirit thrives.

NEMO is a small company but even small companies and individuals can make a difference. Here are some of the green efforts we are currently making:

- >We are incorporating sustainability into our product designs with innovations like our 90% recycled/recyclable Nano Oz™ tent, bamboo tent poles and our Dittor™ reusable tote bag made from old tent samples.
- >As of 2008, all of our aluminum poles from DAC use a more environmentally friendly anodization process that avoids the use of toxic heavy metals. These poles are also recyclable.
- >In 2006 we stopped using PVC in all of our products.

>All of our business partners domestically and overseas run responsible businesses with good working conditions and respect for the environment.

>NEMO employees get one day off every month to pursue a green effort or volunteer with a community organization.

>In 2008, NEMO adopted the northern end of Jenness Beach in North Hampton, NH its favorite surf spot of many NEMO employees through the Blue Ocean Society. The adoption enables NEMO to keep the beach clean throughout the year and also track the types of debris that determine whether the trash is ocean-based or land-based.

>NEMO donates to many groups such as the Access Fund and the National Wildlife Federation to help preserve the natural places we cherish. We have also donated tents to help with disaster relief, including donating over 150 winter mountaineering tents to Pakistan in 2005 following the earthquake in Kashmir.

>NEMO provides discounts and donates tents to college outing clubs to encourage students to get outdoors and foster a love for the environment.

>We recycle everything possible in our shop, including re-using packaging materials and we encourage our manufacturing partners to do the same.

WARNING

If you have additional questions, please contact NEMO Equipment, Inc. directly at 800-997-9301 www.nemoequipment.com.

NOTE: All 2009 NEMO tents meet the CPAI-84 standard for flame retardancy.

NEMO MISSION

Our 2008 product line is the result of 6 years of devoted labor and half a million years or so of developing better tools for shelter and survival. NEMO is about what we have known for a long time. It's about beautiful design and intelligent engineering. It's about serene cloudless days and bitter cold nights spent battling snow drifts and frosts. It's about bringing two worlds together: the world of design and technology and the actual world where we test ourselves and our inventions. We are pursuing perfection. It is an epic journey, often elusive, demanding youthful energy, creativity and courage. We have come a long way in our travels and we promise never to yield in our determination. Like our ancestors who explored new places for the first time, we will change the common idea of what is possible.
