

Tuo™ SLEEPING PAD

Integrated Two Layer Adjustable Comfort

Tuo™ Standard

The Tuo™ series of inflatable backcountry accessories brings a new level of comfort to the sleeping pad. Literally. The Tuo™ sleeping pads have a thin film inside that divides the pad into two separate airtight levels, each with their own valve. Not only does this give you complete redundancy in the event of a puncture, it means you can inflate the base layer firm for protection from rocks and roots and keep the top layer partially inflated for maximum comfort. Enjoy the full 2.3" thickness of Tuo™ Luxury or save a few ounces with the 1.6" thick mummy style Tuo™ Standard. We also offer a 2/3 length version of Standard called the Tuo™ Lite. All models include a stuff sack and repair kit.

Specifications:

--	--	--	--	--	--

Setup Instructions:

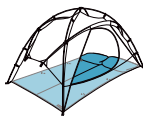

Open both valves on your Tuo™ pad. The pad will partially self-inflate. Blow into the base layer, inflating as firm as possible and then close the valve. A firm base layer will help smooth out rocks, roots and uneven ground

Add a few breaths of air to the top layer and close the valve. Lay on the pad and slowly release air from the top layer valve until you achieve the desired comfort.

Also Available:

Check out our website for information about our tents and accessories. Many NEMO tents are available with Pawprints™, our own unique removable floor covering for inside your tent. Pawprints™ are soft to the touch and fully machine washable. They protect your tent floor from boots and dog paws and they help keep your Tuo™ pads from shifting around during the night.
